English · B2 (technical)

EDUCATION

BSc Computer Engineering
Universitat Politècnica de València · 2017–2023

Erasmus
Oulu University of Applied Sciences (Finland) · 2021–2022

PROFILE

Computer engineer (UPV) with 4 years in consulting and systems administration. As personal projects I design, build and run complete products in production: a booking SaaS with real payments and Verifactu invoicing, a video factory that publishes daily on its own and a team of AI agents that works under rules and human approval. Years as a dive instructor: customer skills and clear communication.

EXPERIENCE

Systems Administrator · Kyndryl
2026 – present

- Change request management and systems administration in critical environments, ensuring availability and traceability.
- Python automation of recurring operational tasks and SQL query optimisation for data exploitation.
- Incident resolution with cross-functional teams, root-cause analysis and continuous infrastructure improvement.
- Procedures and runbooks so recurring operations are repeatable and auditable.
- Daily use of AI assistants for diagnosis, script generation and change review, shortening resolution times.

Consultant · Minsait (Indra)
2023 – 2026

- Data model design and advanced SQL optimisation, with drastic performance and scalability gains.
- Automated deployments and migrations between environments with Python, ensuring data integrity.
- Technical and functional administration of IBM Maximo 8 and 9: application customisation, security and access, automation scripts and BIRT reports.
- Direct client contact: requirements, estimates, follow-up and delivery across multiple technical and functional teams.
- Agile (Scrum): sprints, dailies, backlog refinement and retrospectives with client and vendor teams.
- Documented, reproducible deployment procedures that reduced human error in production releases.

Dive instructor and IT developer · Revolution Dive
2017 – present · part-time

- Full digitalisation of the business: websites, online bookings and payments, SEO and Google Ads campaigns driven by cost per acquisition.
- Booking engine and payment gateway integration, with conversion tracking.
- Group leading and direct sales; international customers in Spanish and English.

PERSONAL PROJECTS

Booking and management SaaS for dive centres
Own product in production: bookings, payments, invoicing and staff

- In production since October 2026, with real card and Bizum payments via Redsys and refunds.
- Invoices with chained Verifactu hashes and submission to the Spanish tax agency (XML validated against official schemas); centre subscriptions on Stripe.
- Multi-tenant, boat schedule, check-in with signature and roles. Vue 3, Express and PostgreSQL in Docker on my own server, with encrypted off-site backups and 200 automated tests.

Automated video factory

Video channels that write, voice, draw and publish themselves

- 4 channels publishing daily with no human input; 270+ videos and 130,000 views on the main channel.
- LLM scripts, neural voice and code-drawn video with Remotion (SVG, d3-geo, three.js).
- €0 per video: free tiers and Cloud Run Jobs that scale to zero.

AI agent office

Delegating work to agents without losing control

- Security, SEO, analytics and coding agents with decision levels: anything external, paid or irreversible waits for my approval.
- Every change goes through security, UX, UI and code reviewers plus an approver; tasks are issues and work arrives as PRs.

AI booking assistant

Multilingual chatbot for dive centres

- Web v1 with Node.js, Gemini and Firestore: per-customer memory, answers with real prices and schedules and leads to booking. Redesign with live catalogue and human handoff as an interactive mock-up.

Client websites

Fast multilingual sites with SEO, Google Ads and Search Console
