STACK

Python · TypeScript · Node.js · Next.js · Vue · SQL / PL-SQL · PostgreSQL · Google Cloud · Serverless · Docker · Git · Linux · REST APIs

AI & AUTOMATION

Large language models · Prompt engineering · Agents & pipelines · RAG · Image & voice generation · API integration · Workflow orchestration

OTHER

IBM Maximo 8/9 · BIRT · Redsys payments · SEO · Google Ads

LANGUAGES

Spanish · native
Valencian · C1
English · B2, daily technical use

EDUCATION

BSc Computer Engineering
Universitat Politècnica de València · 2017-2023

Erasmus exchange · Oulu University of Applied Sciences, Finland · 2021-2022

Sports Technician · Mas Camarena · 2017-2018

INTERESTS

Scuba diving · Running · eSports · Travel

PROFILE

Computer engineer with 4 years of professional experience in consulting and systems administration, specialised in Python backend, advanced SQL, automation and generative AI. I like systems that run on their own and cost little to operate: my own cloud systems are in production with cost per unit measured. Years as a diving instructor leading groups and selling face to face gave me clear communication and customer skills I apply daily.

EXPERIENCE

Systems Administrator
2026 – present

Kyndryl

- Change-request management and systems administration in business-critical environments, ensuring availability and traceability.
- Python automation of recurring operational tasks and SQL query optimisation for data exploitation.
- Incident resolution with cross-functional teams, root-cause analysis and continuous infrastructure improvement.
- Procedures and runbooks so recurring operations are repeatable and auditable.
- Daily use of AI assistants for diagnosis, script generation and change review, shortening resolution times.

Consultant
2023 – 2026

Minsait (Indra)

- Data-model design and advanced SQL optimisation with major performance and scalability gains.
- Automated deployments and environment migrations in Python, guaranteeing data integrity.
- Agile (Scrum) delivery: sprints, dailies, story refinement and retrospectives with client and vendor teams.
- Technical and functional administration of IBM Maximo 8 and 9: application customisation, security and access, automation scripts and BIRT reports.
- Direct client contact: requirements gathering, estimation, task tracking and delivery across multiple technical and functional teams.
- Documented, reproducible deployment procedures that reduced human error in production releases.

Tech Lead & Diving Instructor
2017 – present · part-time

Costa Blanca Dive / Revolution Dive

- Full digitalisation of the business: website, online booking and payments, SEO and Google Ads.
- AI customer-service and lead-qualification chatbot on Node.js and Google Cloud.
- Booking engine and payment gateway integration, with conversion tracking and campaigns optimised for cost per acquisition.
- Group leadership and direct sales to an international customer base, in Spanish and English.

Personal projects

Design, build and operation of complete systems in production

- Platform that generates and publishes video autonomously using language models, image and voice generation; scale-to-zero serverless architecture; hundreds of pieces published with no manual intervention.
- Management ERP (bookings, customers, payments) with a multi-tenant SaaS version and payment gateway; conversational AI assistant on WhatsApp.
- Multilingual websites, payment integrations and SEO.
- Practices applied throughout: containers, scale-to-zero serverless deployment, secrets managed outside the code, log-based monitoring, unit-cost measurement and AI-agent-assisted development.
